

Sparrow Enterprise

| Integrated Application Security and Quality Testing Platform

By consolidating various application security testing solutions into one system, effectively reduce software development time and costs, while facilitating a systematic DevSecOps implementation.

Simplify Application Security with Sparrow Enterprise

As interest in DevSecOps continues to rise, the importance of implementing application security testing at every stage of the Software Development Life Cycle (SDLC) becomes increasingly evident.

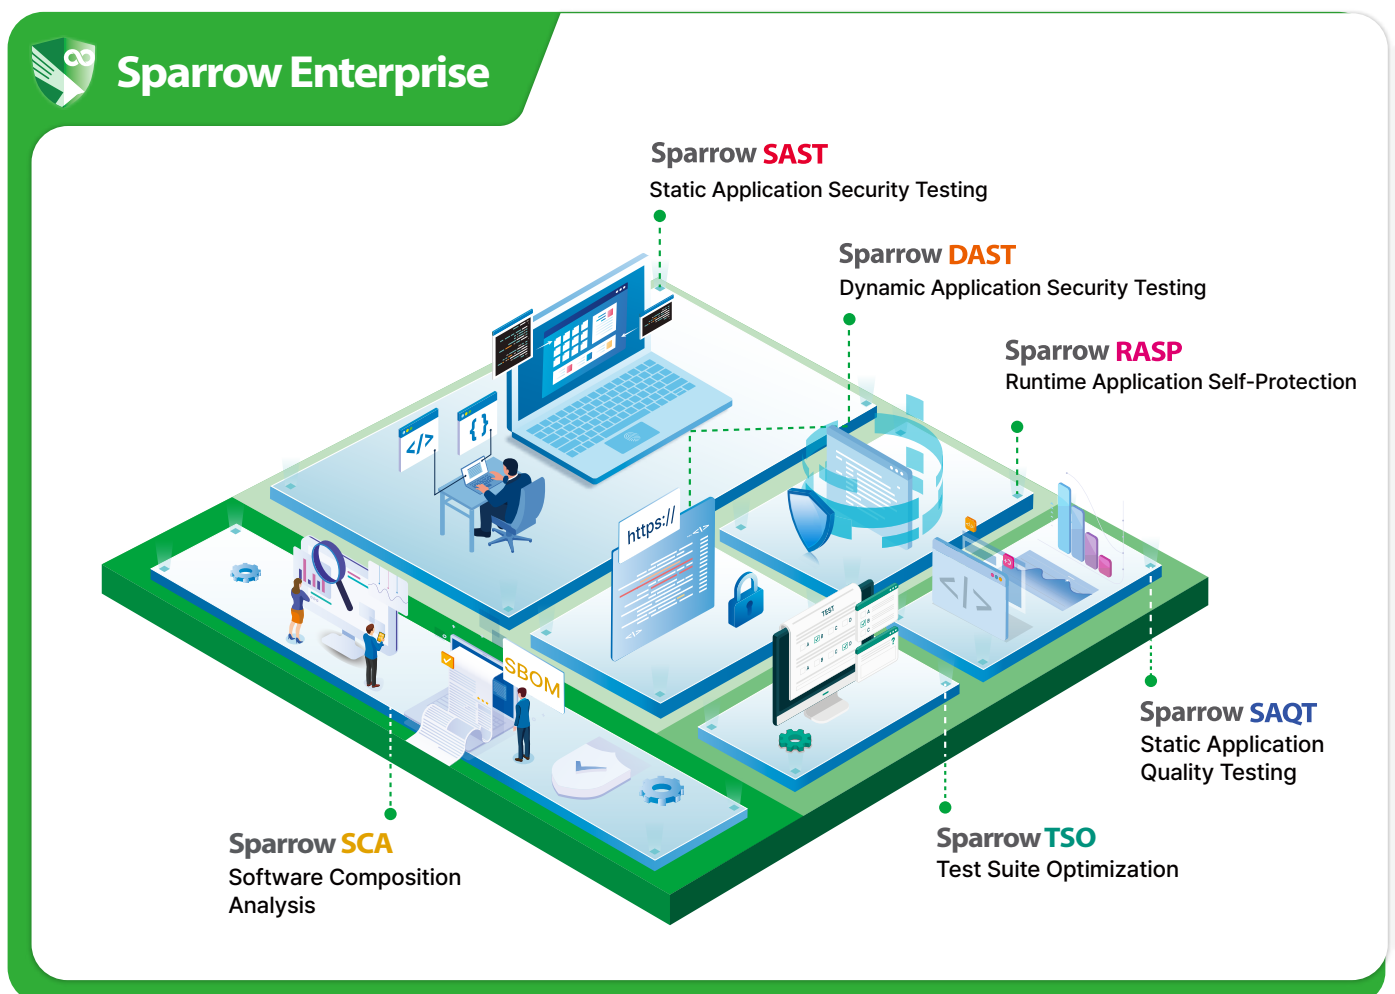

To ensure comprehensive security testing and facilitate DevSecOps, it is critical to utilize and seamlessly integrate various application security testing solutions into a unified process. However, as the number of solutions increases, so does the burden of building, operating, and managing them. Therefore, it is essential to prioritize systematic automation and management to avoid unnecessary waste of IT personnel, resources, and system operations.

Seamlessly integrate security testing!
Implement all security testing at once!
Manage and operate it as a single solution!

With Sparrow Enterprise, utilize all of Sparrow's application security solutions with a single build, ensuring comprehensive protection throughout every stage of application development at minimal cost.

Adapting to the rapidly changing IT landscape requires a unique approach.

Sparrow guarantees the utmost convenience and satisfaction to customers, leveraging years of accumulated experience in developing and operating application security and quality testing tools.

Why Sparrow

Sparrow Enterprise allows users to flexibly choose the desired products based on their needs, enabling the construction of optimized management and operational systems tailored to the organization's business environment and security requirements.

Optimal User Experience

- Provides a unified interface for all solutions' functionalities and management features, offering users a sense of stability.
- Convenience and integration features previously available only in some solutions can now be utilized across all solutions uniformly.

Establishing a DevSecOps Environment

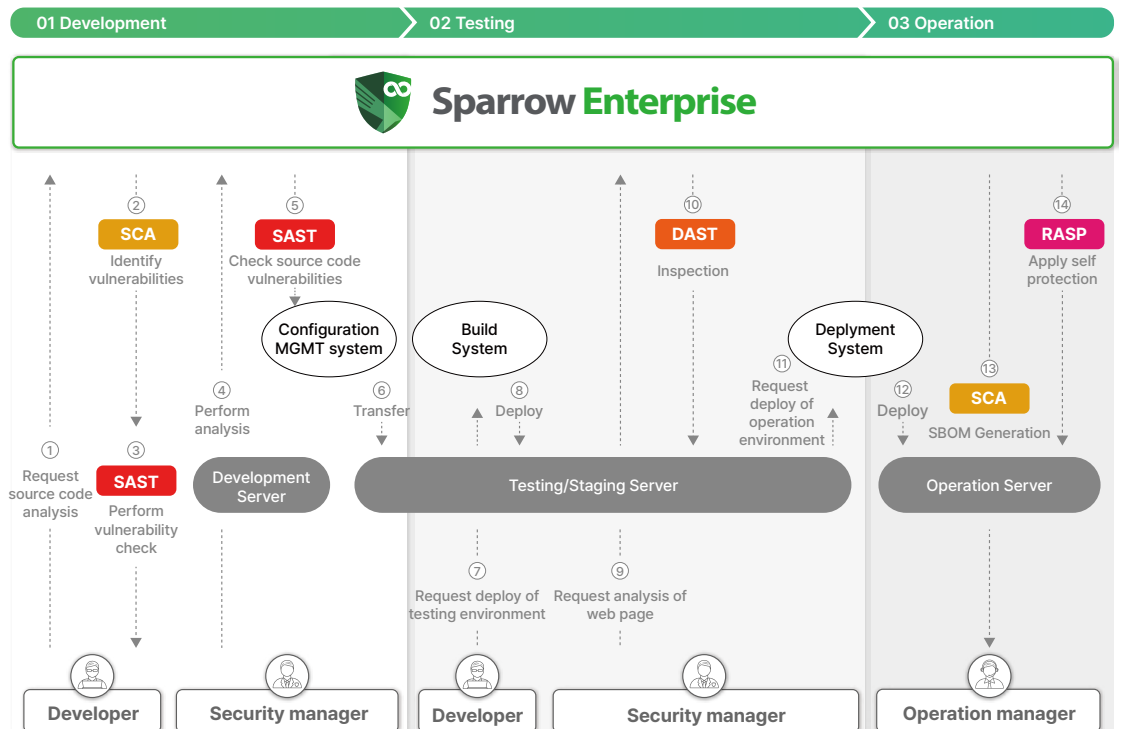

- Comprehensively manages security vulnerabilities and quality issues that may arise at every stage of software development.
- Ensures visibility through integration with various tools such as security testing tools, CI/CD tools, all within a single environment.

Minimizing Usage and Management Resources

- After the initial product adoption, additional products can be introduced or added flexibly without the need for separate system installations.
- Additionally, issues related to each solution can be comprehensively managed on a single page for each project.

Integrated Application Security Testing Example

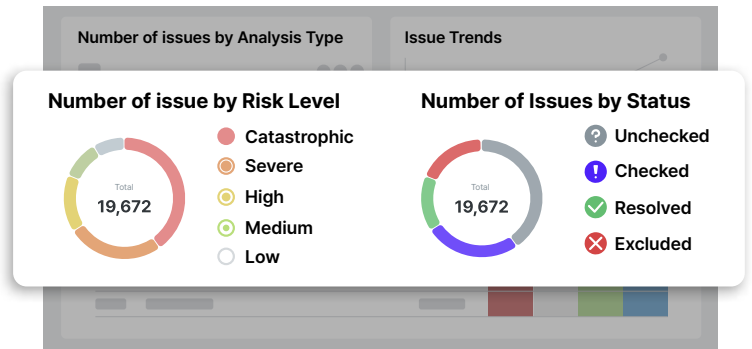

Main Features

With its user-friendly and intuitive interface, Sparrow Enterprise offers enhanced visibility into the management and operation of application security and quality testing.

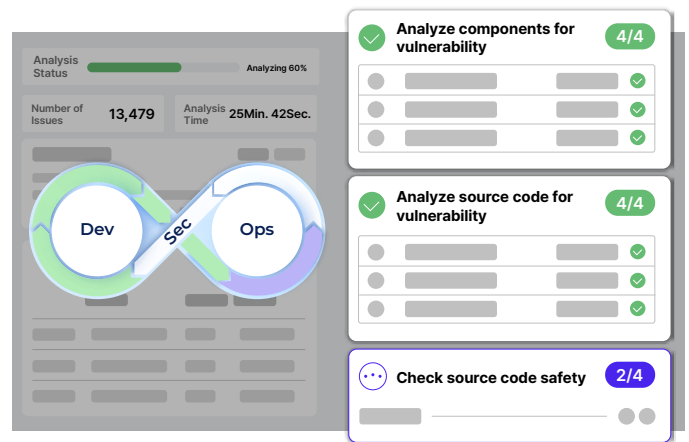

Monitoring and Analysis Statistics

- Provides real-time analysis status and detected issues for the solution used in different projects
- Categorizes issues based on their risk level, status, and analysis types

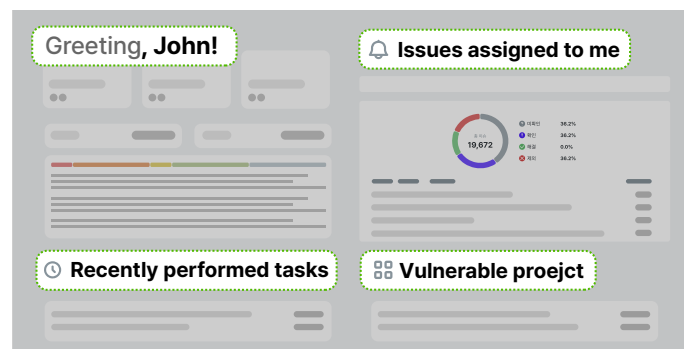

DevSecOps Implement and Management

- Implements DevSecOps workflows using a web-based UI
- Enables tasks assignment and progress tracking for each step of the workflow

Customized User Dashboard

- Offers a personalized dashboard with real-time information on each user's assigned issues and recently performed activities

Sparrow Sparrow is the market-leading provider of application security testing solutions, offering comprehensive solutions such as SAST, DAST, SCA, RASP, and DevSecOps management. These solutions empower our partners and customers to enhance their application security and prevent supply chain attacks. Sparrow solutions are available in various forms, including on-premises, analytic service API, and cloud-based SaaS.
